The L65 Series is a 5mm LED front panel mount indicator designed for a variety of industrial, transportation and aircraft applications that experience frequent vibration....

**VCC Develops Robust 5mm Recessed LED Panel Mount Indicator
That Maximizes Light Distribution**

SAN DIEGO, CA (August 5th, 2016) — VCC, the global leader in indication and specialty illumination solutions, has designed a rugged 5mm LED indicator with an innovative reflector that maximizes light output and distribution. The robust L65 Series LED indicator has a recessed design that offers a 30 or 45 degree viewing angle. The small L65 Series LED panel mount indicators provide high contrast, fast on/off cycling, low energy consumption and low heat output, which delivers long operating life of more than 100,000 hours.

The rugged L65 Series LED panel mount indicators are shock and impact vibration resistant, improving the overall reliability of the equipment. The 5mm diffused LED indicators are also water, dust and oil resistant when used with an O-ring gasket accessory that maximizes the life expectancy of the equipment.

The L65 Series achieves brightness in microseconds and is ideal for new and retrofit designs in a wide range of applications that are subject to frequent on/off cycling including aircraft instrumentation, industrial control panels, transportation dashboards, and more.

The diffused 5mm LED (T13/4) is offered in various colors including red, green and yellow.

“Our new L65 Series LED panel mount indicator features a recessed LED with advanced reflector that maximizes brightness in demanding, high vibration applications. The L65 Series achieves full brightness in microseconds, which is particularly important in daylight applications with numerous on/off cycles,” said Sannah Vinding, Director of Product Development and Marketing at VCC.

Front panel snap-in mounting eases installation and significantly reduces assembly time and cost. The LED indicators snap fit into a 0.315” (8.0mm) panel hole and require no additional hardware. Available with rated voltages from 2VDC to 24VDC, the LED indicators are designed

with straight leads.

The L65 Series diffused LED panel mount indicator is well suited for automation & control, electrical control, food service, industrial, manufacturing, maritime, medical equipment, oil and gas, people mover, and transportation applications.

The brass and chromium plated indicator is compliant with RoHS and REACH requirements.

Customers can start to place orders with distribution on August 12th with small quantity inventory available almost immediately and larger production runs in the 6 week range.

About VCC

Based in greater San Diego, California, Visual Communications Company, LLC, is the leader in illuminated components. VCC is the recognized leader in the development and manufacturing of innovative LED, incandescent, neon and specialty indicator light solutions and light pipes for global markets including aerospace, food service, people movers, transportation, medical, IoT and industrial. VCC provides custom and standard solutions with their design engineering expertise, superior customer service and broadest product line in the industry to exceed user experience. With 40+ years of experience, VCC and its distributors serve customers all over the world. VCC is changing the way of communication visually and indications needs. Learn more at <http://vcclite.com/>
